

$a$  from the  $a + b/\sqrt{N}$  fit (weighted LS) at each radius;  $R = 5\text{--}20$  m from the geometry sweep,  $R = 2.5, 40, 80$  m from the radius extension (MC = 50). Radii below  $L/2 = 1$  m cannot be tracked by the steering law (failure observed at  $R = 1.5$  m, clean tracking from 2.5 m).
