

Filled markers: $N = 5-200$ ($MC = 50$, bars 95% CI). Dashed: $a + b/\sqrt{N}$ fitted on $N \leq 200$ and extrapolated. Open markers: measured at $N = 400-3,200$ ($MC = 50$), not used in the fit. Grey band: $N \geq 400$, where the measured RMSE changes by less than 1.5% in every condition.
